

Why do you duff putts

1. Duffing putts can be a few things: It can be movement of the top half, so keep still with the head when putting.
2. It can be wristiness, so make sure you are stroking from the shoulders and not the hands.
3. It can be trying to hit a putt from off the green that is too long and really requires a chip and run shot rather than a very long putt. If the swing, required, is too big you could duff the putt.

GOOD LUCK,

Anne
